Professional Synopsis

Senior Software Lead with 13.5 years of experience in designing and developing scalable enterprise applications using Java, Python, Spring Boot, Microservices, and AWS cloud technologies. Strong expertise in distributed systems, system integrations, JVM performance tuning, and backend architecture for high-volume production environments.

Hands-on technical lead and senior individual contributor with experience driving architecture decisions, improving application performance, and delivering mission-critical solutions in Agile environments. Skilled in AI-powered application development using LLMs, RAG, LangChain, LangGraph, MCP, and vector databases. Worked onsite with clients in Sydney, Australia, collaborating with global cross-functional teams.

Technical Skills

Programming Languages:	Java, Python, JavaScript, Shell Scripting, XSLT
Backend & Frameworks:	Spring Boot, Spring Core, Spring MVC, Spring REST, Spring Data JPA, Hibernate, JDBC, FastAPI, LangChain
Microservices & Integration:	REST APIs, Microservices Architecture, Kafka, ActiveMQ, IBM MQ, Redis
Cloud & DevOps:	AWS, Docker, Kubernetes (EKS), Terraform, Helm Charts, Jenkins, Git, Blue-Green Deployments
AI & Generative AI:	LLMs, Agentic AI, RAG (Retrieval-Augmented Generation), Amazon Bedrock, Claude, Llama, LangGraph, MCP, Groq, AWS Kiro, Amazon Q Developer, Vector Databases, HuggingFace Embeddings, Sentence Transformers, Cross-Encoder Reranking, Prompt Engineering, AI Agents
Databases:	PostgreSQL, Oracle DB, SQL Server, MongoDB
Testing & Quality:	JUnit, Mockito, PowerMock, SonarQube
Frontend:	HTML, CSS, jQuery, JavaScript
Tools & Platforms:	IntelliJ IDEA, PyCharm, Visual Studio Code, DBeaver, Eclipse, Maven, Jira, PuTTY, WinSCP

Professional Experience

Senior Software Lead
Hexagon Capability Centre India Pvt Ltd (formerly Infor, now Octave) | March 2021 – Present

Domain: R&D Engineering

Enterprise AI Chat Platform

- Architected and developed an enterprise AI chat platform enabling industrial customers to interact with product documentation and analyze files using natural language support across 6 languages.
- Designed a multi-agent AI workflow consisting of 9 specialized agents using AWS Bedrock (Claude, Llama 4) and Strands Agents SDK for intent detection, SQL generation, RAG pipelines, re-ranking, and multi-modal document processing.
- Built a natural language-to-SQL engine with 7-layer validation, row-level security enforcement, Neptune Analytics knowledge graph integration, and MCP (Model Context Protocol) based query execution.
- Engineered real-time streaming infrastructure using FastAPI, Redis Streams, and Server-Sent Events (SSE), enabling low-latency token streaming and sub-second response delivery.

Data Integration Platform

- Spearheaded backend development of Dataflow Studio, a scalable enterprise platform for data integration and workflow automation.
- Designed and implemented core microservices using Java 21 and Spring Framework, improving platform maintainability and JVM performance optimization.

- Automated infrastructure provisioning and deployments using Kubernetes, Terraform, Helm Charts, and Docker, reducing manual DevOps efforts by 40%.
- Collaborated with cross-functional teams on architecture planning, code quality initiatives, Agile delivery, and engineering productivity improvements.

Senior Software Developer

EPAM Systems | November 2017 – March 2021

Client: Thomson Reuters

Onsite Experience: Sydney, Australia

- Contributed to Westlaw and ANZ Publishing Pathway (KORU) platforms for legal content transformation and delivery.
- Designed Spring Boot microservices and REST APIs for large-scale legal content ingestion and processing workflows.
- Built backend services using Java, Spring Integration, XML transformation pipelines, and AWS cloud technologies.
- Played a key role in modernization, backend refactoring, deployment activities, and module ownership in Agile delivery environments.

Senior Analyst / Professional 1 – Application Delivery

Computer Science Corporation (CSC) India Pvt Ltd | June 2016 – October 2017

Client: Verizon

Project: My Verizon Prepaid Mobile Application

- Developed backend services and REST APIs for Verizon's prepaid mobile platform supporting account and service management functionalities.
- Built Spring MVC-based applications using Java 8 and Oracle Database for high-traffic mobile applications.
- Worked on backend integration, database operations, production support, and Agile-based release activities.

Associate Software Developer

Compugain India Pvt Ltd | October 2012 – May 2016

Product: Overture – Loan Origination System

- Developed enterprise modules for a Loan Origination System focused on underwriting, risk analysis, and automated credit decisioning.
- Built backend services using Core Java, Spring REST, Hibernate, PostgreSQL, and AngularJS.
- Worked on client enhancements, code optimization, bug fixing, JUnit testing, and Agile development activities.

Personal Projects

Portfolio Website with AI Personal Assistant ([Kulbhushan Saxena - Portfolio](#))

- Developed an AI-powered conversational assistant integrated into a personal portfolio website using RAG, hybrid search, and vector embeddings.
- Engineered multi-tool intent routing using LLM-based query classification and specialized AI tools for retrieval, web search, summarization, and conversational workflows.
- Built real-time streaming responses using FastAPI, Server-Sent Events (SSE), and Qdrant vector database with dense embedding search.
- Implemented production-grade capabilities including session management, prompt injection guardrails, circuit breaker patterns, rate limiting, and conversation persistence.

Educational Qualifications

Bachelor of Engineering (IT) — LNCT College, Bhopal — Graduated with Honors (79%)

Senior Secondary (12th) — St. Joseph's School, MP — 78.6%

High School (10th) — St. Joseph's School, MP — 82.2%
